

Protect your investments and enjoy the peace of mind that a "House of Electronics" home protection package can provide!

At **House of Electronics** we are able to provide an electrical protection package, which will filter your incoming AC power, telephone and cable (or satellite) lines *at the source* and at individual equipment protecting your home against electrical interference. As part of this package we will include a Battery back-up device, which will allow your sump pump to continue running in the event of a total power failure, thereby saving your basement from expensive flood damage.

Today's homes include expensive LCD/Plasma TV entertainment systems, security systems and multiple computers. Just about every appliance in the home now contains microprocessor circuits to control their operation. All this equipment is easily damaged by power surges. Power surge related losses cost homeowners billions of dollars each year. The rapid growth of microprocessor based devices in the home and the growing popularity of "smart home" technology will accelerate these costs.

Power outages can occur very frequently, Lightning strikes are more dramatic but occur seldom. Switching transients, however, can be up to 20000 volts and, although they last only 10 to 100 micro (millionths) seconds, they stress components and can happen several times a day!

1. The Titan 40W provides high quality surge protection in a compact and versatile hardwired package and is an ideal TVSS device for protection on residential circuit breaker panels. The Titan 40W can also be installed at the electric meter, on well pumps or on other sensitive electronic equipment. **(\$210:00)**
2. The various products within the Wallmount family gives you the option of data and cable line protection based on the needs of the protected equipment. The Wallmount line of surge protection products utilize a suppression circuit that provides up to 26,000 amps of surge protection. **(\$90:00)**
3. Vesta Pro UPS back-up, featured with CPU controlled design, built with AVR and smart communication interface, not merely provides reliable power protection but also provides smart power management for increasing internet and Ethernet applications with Smart battery management. **(\$450:00)**

Home Protection Package \$725.

Perform a Risk Assessment on your home. Analyze the life expectancy and replacement costs of the appliances in your home. Add to this the aggravation and time wasted waiting for a damaged appliance to be repaired or replaced. Now you can secure the phone line, the cable TV (or satellite TV) line, and the electrical distribution panel for one low price of **\$725**.
